

DEVELOPMENT OF DPR'S STATEWIDE PESTICIDE APPLICATION NOTIFICATION SYSTEM

PRACTICAL CONSIDERATIONS

In developing a system to provide notification about pesticide applications, DPR will consider:

1. All voices, feedback and perspectives
2. Distribution method(s) that most effectively provide information to the community
3. Timeframe for notification that will allow community members to make decisions about precautions they may want to take to protect their health
4. Level of information useful and meaningful for communities to receive
5. Available resources at the state and county level to provide information that is helpful and meaningful to communities
6. How to provide information in a way that minimizes overlap with existing systems
7. Methods for evaluating system success
8. Flexibility of the system to allow expansion and/or modification to accommodate additional or changing needs
