

California Notice 2018-21

**NOTICE OF AVAILABILITY OF PROBLEM FORMULATION DOCUMENT
FOR THE NEW ACTIVE INGREDIENT
ALLYL ISOTHIOCYANATE (AITC)**

In October 2018, the Department of Pesticide Regulation (DPR) announced it was initiating a human health risk assessment for the new fumigant active ingredient, allyl isothiocyanate (AITC). By policy, DPR conducts human health risk assessments on new fumigant active ingredients before making a registration decision on any proposed pesticide products containing the new active ingredient.

DPR is issuing this notice to inform stakeholders that the draft problem formulation document for AITC is now available for public comment. The problem formulation document provides the anticipated scope of the human health risk assessment, potential exposure scenarios, and future mitigation activities that DPR may propose prior to registering pesticide products containing the active ingredient AITC. The problem formulation document is available on DPR's Web site at <https://www.cdpr.ca.gov/docs/whs/active_ingredient/aitc.htm>.

If you have comments relevant to the problem formulation document, please submit them to DPR within sixty (60) days from the date of this notice. Please address all submissions to:

Risk Assessment -- AITC
Attn: Risk Assessment Coordinator
Pesticide Registration Branch
Department of Pesticide Regulation
1001 I Street, P.O. Box 4015
Sacramento, CA 95812-4015

DPR will review comments and incorporate technical suggestions in the text of the draft risk characterization document, where appropriate. Documents pertaining to the human health risk assessment for AITC will be available at <https://www.cdpr.ca.gov/docs/whs/active_ingredient/aitc.htm>.
