

## Use Restrictions (Management Practices) for Leaching GWPAs, except Inside Canal and Ditch Banks and Artificial Recharge Basins, and on Engineered Rights of Way

Choose one of the following management practices for designation on the permit:

1. Do not apply any irrigation water for six months following application of the pesticide; or
2. Apply the pesticide to the planting bed or the berm above the level of irrigation water in the furrow or basin for six months following application of the pesticide; or

3. Manage irrigation so that the ratio of the amount of irrigation water applied divided by the net irrigation requirement is 1.33 or less for six months following application of the pesticide; or

Example: Herbicide Applied to Mature Citrus Grove in February in Fresno County.

Month	Net Irrigation Requirement		Max. Irrigation Adjustment Factor	Max. Irrigation per Acre for Month (inches) ( $ET_0 \times Kc \times 1.33$ )
	$ET_0^*$	$Kc^*$		
March	3.7	.67	1.33	3.3
April	5.3	.67	1.33	4.7
May	6.8	.67	1.33	6.1
June	7.6	.67	1.33	6.8
July	8.1	.67	1.33	7.2
August	7.0	.67	1.33	6.2

\*( $E_{t0}$  = reference evapotranspiration,  $K_c$  = crop coefficient)
