

## Ant baits provide long-term control – sprays don't.

### How do ant baits work?

- Insecticides mixed with bait are placed inside bait stations.
- Foraging ants take the bait back to the nest to feed other ants.
- Don't get impatient. It can take weeks to kill the entire colony.

### How can you help?

- Keep food in sealed containers.
- Clean up crumbs and spills.
- Don't spray insecticides near bait stations.
