

This report represents the top five pesticides used in each county in 2008 and the top five sites upon which these pesticides were used. The ranking of sites and pesticides is determined by total pounds of active ingredient used. The number of applications include only production agricultural applications, and the cumulative acres treated are mostly agriculture. Data are from the Department of Pesticide Regulation's Pesticide Use Report, October 2009.

The number of acres treated means the cumulative number of acres treated. The acres treated in each application are summed even when the same field is treated more than once in a year. (For example, if one acre is treated three times in a year with an individual active ingredient, it is counted as three acres treated.)
