DATE: October 4, 2006

SUBJECT: RISK MANAGEMENT DIRECTIVE FOR CARBOFURAN

The Department of Pesticide Regulation (DPR) staff completed the risk characterization document for carbofuran on January 23, 2006. Since the U.S. Environmental Protection Agency (U.S. EPA) has proposed to phase out all remaining uses of carbofuran within four years, we will not initiate any mitigation measures. I would advise that staff keep apprised of U.S. EPA's progress.

In the event that U.S. EPA allows carbofuran uses to continue or if new uses are proposed, please ensure that any product registered in California does not result in acute exposures exceeding 0.01 mg/kg, subchronic and chronic exposures exceeding 0.1 mg/kg/day.
