

***Agricultural Drift* Cases Reported in California¹ Associated With² Pesticide
Exposure Summarized by Application Sites
2007**

Application Site³	Number of Cases⁴	Number of Incidents⁵
BERRIES		
Strawberries	18	1
FIBER CROP		
Cotton	2	2
FORAGE CROP		
Alfalfa	5	1
GRAIN		
Corn	15	2
Rice	1	1
GRAPES		
Grapes	3	1
LEAFY/STEM VEGETABLE		
Lettuce	5	4
LIVESTOCK		
Dairy Animals	1	1
NON-CROP		
Soil	77	7
Uncultivated Agricultural Areas (Other or Unspecified)	1	1
Uncultivated Non-agricultural Areas	1	1
NUT TREES		
Almonds	33	5
OTHER FRUIT		
Avocados	1	1
ROOT CROP VEGETABLE		
Carrots	1	1
STONE FRUIT		
Nectarines	1	1
Plums	7	1
SUGAR CROP		
Sugarbeets	1	1
TREES		

Application Site³	Number of Cases⁴	Number of Incidents⁵
Ornamental and/or Shade Trees	6	2
TURF		
Ornamental Sod Farm (Turf)	1	1
TOTAL	180	35

¹ **Source:** California Department of Pesticide Regulation, Pesticide Illness and Surveillance Program.

² **Associated With:** Includes cases classified as definitely, probably or possibly related to pesticide exposure

Definite : High degree of correlation between pattern of exposure and resulting symptomatology. Requires both medical evidence (such as measured cholinesterase inhibition, positive allergy tests, characteristic signs observed by medical professional) and physical evidence of exposure (environmental and/or biological samples, exposure history) to support the conclusions.

Probable : Relatively high degree of correlation exists between the pattern of exposure and the resulting symptomatology. Either medical or physical evidence is inconclusive or unavailable.

Possible : Health effects correspond generally to the reported exposure, but evidence is not available to support a relationship.

³ **Application Sites:** Site of the pesticide application. For crops, this includes applications at the growing site and to the commodity while being packed for sale. For incidents involving drift, the intended application site is listed.

⁴ **Cases by Incidents:** Indicates the number of individuals exposed in one incident of agricultural drift.

⁵ **Incidents:** Indicates the number of episodes where agricultural pesticide drift occurred based on the application site.

About the Pesticide Illness Surveillance Program Data

Pesticide-related illnesses have been tracked within the state of California for more than 50 years. The California Environmental Protection Agency, Department of Pesticide Regulation (DPR) maintains a surveillance program which records human health effects of pesticide exposure. The Pesticide Illness Surveillance Program (PISP) documents information on adverse effects from pesticide products, whether elicited by the active ingredients, inert ingredients, impurities, or breakdown products. This program maintains a database, which is utilized for evaluating the circumstances of pesticide exposures resulting in illness. This database is consulted regularly by staff who evaluate(s) the effectiveness of the DPR pesticide safety programs and recommend changes when appropriate.
