

## Pesticides on the Proposition 65 List

In 1986, a law called the Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65) was passed. Proposition 65 requires California to make a list of chemicals that cause cancer, birth defects, or other reproductive harm. The Proposition 65 list contains many different chemicals, including dyes, solvents, pesticides, drugs, and food additives. **If a pesticide you use is on the Proposition 65 list, your employer must warn you if you could be exposed to enough pesticide to result in a significant health risk.** Your employer may also choose to tell you if a pesticide on the Proposition 65 list has been sprayed, even if health problems are not likely. Your employer must keep information on each pesticide application, tell you where this information is kept, and let you look at it without having to ask for it. Listed below are pesticides known by the State to cause cancer or reproductive toxicity.
