EXECUTIVE SUMMARY

SUMMARY

Food and Agricultural Code (FAC) section 13144(b) requires the Department of Pesticide Regulation (DPR) to annually post the following information to DPR's Web site:

- A list of pesticide active ingredients (A.I.s) registered for agricultural use for which there are groundwater protection data gaps.
- A list of the pesticide A.I.s with data exceeding specific numerical values (SNVs).
- The sales and use information for the pesticides that exceed the SNVs.

As part of the registration process, DPR obtains data for each agricultural use pesticide that includes information on mobility, persistence and environmental fate. Pesticides that exceed the SNVs established by DPR have a greater potential to contaminate groundwater because they are both mobile and persistent in the environment.

The 2008 Status Report lists 233 pesticides for agricultural use meeting or exceeding the SNVs. Of those 233 A.I.s, only 175 are currently registered for use in California. The list includes all pesticides for which there is data on file, regardless of registration status. In many cases, A.I.s that are no longer registered for sale in California may still be used until the existing stocks are depleted. Occasionally, registrants may propose new uses for A.I.s that are no longer registered. Since the current or potential uses of unregistered A.I.s could threaten groundwater, DPR continues to include them in the list.

As compared to the previous report (2007), the current report includes four new A.I.s that exceed the SNVs. At the time of reporting, chlorantraniliprole had been approved for sale and use in California while fluopicolide, flutriafol, and saflufenacil are still pending registration. The mean physical-chemical properties for each listed A.I., relating to the SNVs, are also given in the report. There are no data gaps for the 175 currently registered pesticides; the data requirements for registration have all been satisfied. Information on California sales of these A.I.s, a description of their use, and their applications are also specified.

BACKGROUND

The Pesticide Contamination Prevention Act (PCPA) of 1985 added sections 13141–13152 to the FAC and established a set of data requirements for identifying and tracking potential and actual ground water contaminants. As required by the PCPA, registrants of agricultural use pesticides must provide DPR with data on physical and chemical properties and environmental fate of the A.I.s in their products. DPR established threshold values, or SNVs, for water solubility, soil adsorption, hydrolysis half-life, aerobic soil metabolism half-life, and anaerobic soil metabolism half-life. DPR has not yet established an SNV for terrestrial field dissipation data although it is collected and evaluated as part of the pesticide registration process. DPR's SNVs are equal to or more stringent than the values used by the U.S. Environmental Protection

Agency (EPA). SNVs provide a basis for estimating the relative risk of groundwater contamination posed by agricultural use pesticides. Agricultural pesticides that exceed the SNVs are classified as potential ground water contaminants (leachers) and, as required, are listed in this annual report.

DPR established the Ground Water Protection List (GWPL) (Title 3, California Code of Regulations [3 CCR] section 6800) to identify pesticides that have been found in groundwater and those that pose a risk to groundwater. Title 3 CCR section 6800(a) includes pesticides that have been detected in ground water or soil in California and whose use is regulated to mitigate or prevent further pollution. Title 3 CCR section 6800(b) includes registered agricultural use pesticides that exceed the SNVs and are applied or injected into the soil or require flood or furrow irrigation within 72 hours after the application. Pesticides included in 3 CCR section 6800(b) are subject to monitoring to determine whether they have migrated to ground water. If any are found to have migrated to groundwater as a result of agricultural use, the PCPA establishes procedures for modifying or canceling the use of such pesticides to mitigate or prevent further pollution.

REPORT REQUIREMENTS PURSUANT TO THE PESTICIDE CONTAMINATION PREVENTION ACT

The PCPA requires DPR to provide the following information for pesticides registered for agricultural use in California. The information is reported on the DPR's Web site.

1. A list of each pesticide A.I., other specified ingredient, or degradation product of a pesticide A.I. for which there is a ground water protection data gap.
2. A list of pesticides that contain an A.I., other specified ingredient, or degradation product of a pesticide A.I. that is greater than one or more of the numerical values established pursuant to PCPA or is less than the numerical value in the case of the soil adsorption coefficient in both of the following categories:
 - (a) Water solubility or soil adsorption coefficient (K_{oc})
 - (b) Hydrolysis, aerobic soil metabolism, anaerobic soil metabolism, or field dissipation.
3. Provide for each pesticide A.I. listed pursuant to number 2 (if information is available), the amount sold in California during the most recent year (for which sales information is available), and where and for what purpose the pesticide was used.

The information is presented in two sections: (1) "Status of the Ground Water Protection Data Gaps" and (2) "Physical-Chemical Properties, Sales, Use, and Mode of Action for Pesticide Active Ingredients Exceeding the Specific Numerical Values," which lists the properties of pesticides identified as potential leachers and the SNVs established by DPR.

SECTION 1: STATUS OF THE GROUND WATER PROTECTION DATA GAPS

If a registrant is lacking the data as required by the PCPA, then they may apply for an interim registration, as stipulated in FAC sections 13161-13170. DPR can defer, up to a period less than three years, the submission of no more than three of the following registration data requirements:

- Efficacy studies.
- Octanol-water partition coefficient (K_{ow}).
- Soil photolysis.
- Field dissipation studies.
- A re-done environmental fate study to correct errors or a study conducted under California conditions.

Except for efficacy data, the deferral of any of the other data types results in a “groundwater protection data gap” as defined in FAC section 13142(f). Currently, there are no interim registrations for agricultural use products. The lack of interim registrations indicates that there are no registered agricultural use pesticides with groundwater protection data gaps.

SECTION 2: PHYSICAL-CHEMICAL PROPERTIES, SALES, USE, AND MODE OF ACTION FOR ACTIVE INGREDIENTS EXCEEDING THE SPECIFIC NUMERICAL VALUES

This report includes an evaluation of the potential of pesticide A.I.s to leach to ground water. PCPA section 13144(a) of (PCPA, Stats. 1985, Ch. 1298, section 1) requires DPR to establish thresholds known as SNVs for six physicochemical characteristics of environmental fate: water solubility, K_{oc}, hydrolysis half-life, aerobic soil metabolism half-life, anaerobic soil metabolism half-life, and field dissipation half-life. These parameters are presumed by the PCPA to correlate with the potential of a pesticide to leach to ground water. Water solubility and K_{oc} are considered indicators of the mobility of an A.I. within the soil, while the half-lives for hydrolysis, aerobic and anaerobic soil metabolism and field dissipation are considered indicators of the persistence of the chemical in the soil.

Statistical comparison procedures were used to calculate the SNVs. Based on nationwide ground water studies, a list of pesticide A.I.s was created and separated into two groups: (1) chemicals that had been detected in ground water as a result of legal agricultural use (leachers) and (2) chemicals that had been sampled for and not found in ground water as a result of legal agricultural use (nonleachers). Estimates of the physicochemical parameter values for the chemicals in each group were determined from data available in the open literature and from DPR-approved studies submitted by pesticide registrants in fulfillment of the data call-in requirements in FAC section 13143. The data for each of the parameter values were tested for their usefulness in discriminating between leachers and nonleachers by determining whether the means of the two groups were significantly different. The tests showed that the means of the data for water solubility, hydrolysis half-life, K_{oc}, and the anaerobic soil metabolism half-life for chemicals identified as leachers were significantly different from the means of chemicals

identified as nonleachers. The SNVs for these properties were established as those values that would identify as leachers 90 percent of the chemicals found in ground water due to agricultural use (Wilkerson and Kim, 1986). The means of the two groups for aerobic soil metabolism, however, were not significantly different. Because the PCPA requires DPR to establish an SNV for each physicochemical property, the SNV for the aerobic soil metabolism half-life was set at a value that minimized its importance in the discrimination procedure. The SNVs established by DPR are reevaluated periodically to incorporate new data into the calculations. Details on revisions to the SNVs can be found in prior reports (Johnson, 1991; Johnson, 1989; Johnson, 1988). The SNVs currently in regulation (3 CCR, section 6804) are:

- | | |
|---|-------------------------|
| (a) Water solubility | 3 ppm |
| (b) K_{oc} | 1900 cm ³ /g |
| (c) Hydrolysis half-life | 14 days |
| (d) Aerobic soil metabolism half-life | 610 days |
| (e) Anaerobic soil metabolism half-life | 9 days |

The FAC section 13144 requires SNVs to be at least equal to those established by the U.S. EPA. The U.S. EPA has yet to establish an SNV for field dissipation half-life. DPR will establish a SNV for field dissipation half-life once the U.S. EPA implements a value for this property.

Generally, we receive multiple studies for each physicochemical property. In order for that data to be used in the preparation of this report, each study must first meet certain minimum criteria. The criteria for determining whether or not a pesticide is a potential leacher varies by data type and only for solubility and hydrolysis studies. For solubility, only studies conducted at 20⁰ C are considered. Hydrolysis studies must be carried out anywhere between 19⁰ C and 31⁰ C and at a pH somewhere between 6.0 and 8.0. All data that meets the above criteria are then averaged within their respective physicochemical property.

Pursuant to FAC section 13144(b), pesticide A.I.s are placed on a list of candidates as potential leachers if both the mobility and persistence parameter values exceed (or are less than in the case of the K_{oc}) the corresponding SNVs. If a candidate potential leacher has a pesticide label that requires or recommends the application method to be by injection into the soil or by chemigation or that application is to be followed by flood or furrow irrigation within 72 hours, then the chemical is placed on the GWPL (FAC section 6800[b]). Table 1 is a list of candidate potential leachers, which are contained in currently registered pesticide products, and their respective mean physicochemical parameter values.

There are four A.I.s that are new to the 2008 list of potential leachers:

- Chlorantraniliprole (currently registered)
- Fluopicolide (under review)
- Flutriafol (under review)
- Saflufenacil (under review)

Chlorantraniliprole is an insecticide, fluopicolide and flutriafol are fungicides, and saflufenacil is an herbicide.

PCPA section 13144(b) also requires DPR to provide, for each A.I. in Table 1, a list of the amount sold in California, and a list of where and for what purpose the economic poison was used. The 2007 pesticide sales data and use are shown in Table 2. Information on the A.I.s and their modes of action can be found in Table 3. DPR's Registration Branch's Web site, available at <http://www.cdpr.ca.gov/docs/registration/regmenu.htm>, provides updated information on the status of pesticide A.I.s and their respective products.

Triclopyr, triethylamine salt	X	115,915.98	67,253.13
Trifloxysulfuron-sodium	X	23,472.38	168.52
Triflumizole	X	30,592.78	19,307.78
Triflusulfuron-methyl	X	7,060.00	393.44
Trinexapac-ethyl	X	5,310.77	4,567.19
Triticonazole		0.00	0.00
Uniconazole-P	X	3.37	2.56
Vernolate		0.00	0.00
Vinclozolin	X	214.50	390.26
Zoxamide		0.00	0.00
Totals	175	36,359,918.39	24,366,834.80

Table 3. Description of use for currently registered A.I.s exceeding the SNVs (2008 report).

A.I.	Use	Description
2,4-D	Herbicide	Hormone type
2,4-D, 2-ethylhexyl ester	Herbicide	Hormone type
2,4-D, butoxyethanol and isooctyl esters	Herbicide	Hormone type
2,4-D, diethanolamine salt	Herbicide	Hormone type
2,4-D, dimethylamine salt	Herbicide	Hormone type
2,4-D, isooctyl ester	Herbicide	Hormone type
4(2,4-DB), dimethylamine salts	Herbicide	Selective, post-emergent
Acephate	Insecticide	Contact, systemic
Acetamiprid	Insecticide	Systemic
Acibenzolar-s-methyl	Fungicide	Selective, systemic
Alachlor	Herbicide	Pre-emergent
Aldicarb	Insecticide/ acaricide	Systemic
Atrazine	Herbicide	Selective, residual
Azinphos-methyl	Insecticide	Contact, non-systemic
Azoxystrobin	Fungicide	Foliar
Bensulfuron methyl	Herbicide	Selective
Bensulide	Herbicide	Selective, pre-emergent
Bentazon, sodium salt	Herbicide	Selective, pre-emergent
Bifenazate	Insecticide/ acaricide, miticide	Contact
Bispyribac-sodium	Herbicide	Selective, post-emergent
Bromacil	Herbicide	Pre-emergent
Bromoxynil heptanoate	Herbicide	Selective, post-emergent
Bromoxynil octanoate	Herbicide	Selective, post-emergent
Butylate	Herbicide	Selective, preplant
Cacodylic acid	Herbicide/ silvicide	Harvest aid
Calcium acid methanearsonate	Herbicide	Selective
Carbaryl	Insecticide	Broad spectrum
Carbofuran	Insecticide/ acaricide/ nematicide	Soil, foliar
Chlorantraniliprole	Insecticide	Soil, foliar
Chloropicrin	Warning agent/ fumigant	Space, commodity, soil

A.I.	Use	Description
Chlorothalonil	Fungicide	Broad spectrum, protectant
Chlorsulfuron	Herbicide	Selective
Clethodim	Herbicide	Systemic, post-emergent
Clomazone	Herbicide	Broad spectrum, pre-emergent
Clopyralid	Herbicide	Selective, post-emergent
Clopyralid, monoethanolamine salt	Herbicide	Selective, post-emergent
Clopyralid, triethylamine salt	Herbicide	Selective, post-emergent
Clothianidin	Insecticide	Systemic
Cycloate	Herbicide	Selective, preplant
Cyprodinil	Fungicide	Systemic
Cyromazine	Insecticide	Growth regulator
Dazomet	Fungicide/ nematocide/ herbicide/ slimicide	Preplant
Diazinon	Insecticide/ nematocide	Soil/foliar/seed
Dicamba	Herbicide	Selective, systemic
Dicamba, diglycolamine salt	Herbicide	Selective, systemic
Dicamba, dimethylamine salt	Herbicide	Selective, systemic
Dicamba, sodium salt	Herbicide	Selective, systemic
Dichlobenil	Herbicide	Selective, cellulose
Dichlorprop-P, dimethylamine salt	Herbicide	Selective, post-emergent
Dichlorprop-P, isooctyl ester	Herbicide	Selective, post-emergent
Dicloran	Fungicide	Pre-, post-harvest
Diflufenzopyr, sodium salt	Herbicide	Selective, post-emergent
Dimethenamid-P	Herbicide	Selective, pre-emergent
Dimethipin	Plant growth regulator	Systemic
Dimethoate	Insecticide/ acaricide	Systemic
Dimethomorph	Fungicide	Selective, post-emergent
Dinotefuran	Insecticide	Selective, systemic
Diquat dibromide	Desiccant/ herbicide	Contact
Disulfoton	Insecticide/ acaricide	Systemic
Dithiopyr	Herbicide	Pre-, post-emergent
Diuron	Herbicide	Selective, general
Dodine	Fungicide	Systemic, preventative, foliar

A.I.	Use	Description
Emamectin benzoate	Insecticide	Systemic, contact
Endothall, dipotassium salt	Herbicide/ algicide/ growth regulator	Pre-, post-emergent
Endothall, mono (N,N-dimethyl alkylamine) salt	Desiccant/ algicide	Contact
EPTC	Herbicide	Selective
Ethofumesate	Herbicide	Selective
Ethoprop	Insecticide/ nematocide	Soil
Fenamiphos	Nematicide	Selective
Fenarimol	Fungicide	Systemic, foliar
Fenhexamid	Fungicide	Systemic, curative, foliar
Fenoxycarb	Insecticide	Growth regulator
Fipronil	Insecticide	Contact, stomach
Flonicamid	Insecticide	Contact, stomach
Fludioxonil	Fungicide	Contact
Flurprimidol	Herbicide	Selective, post-emergent
Flutolanil	Fungicide	Systemic
Foramsulfuron	Herbicide	Selective, post-emergent
Formetanate hydrochloride	Acaricide/ insecticide	Foliar
Fosetyl-AL, technical	Fungicide	Systemic, preventative
Glufosinate-ammonium	Herbicide	Selective
Glyphosate	Herbicide	Nonselective, post-emergent
Glyphosate, isopropylamine salt	Herbicide	Nonselective, post-emergent
Halosulfuron-methyl	Herbicide	Pre-, post-emergent
Hexazinone	Herbicide	Contact, residual
Imazamox, ammonium salt	Herbicide	Selective, post-emergent
Imazapic, ammonium salt	Herbicide	Selective, pre-, post-emergent
Imazapyr	Herbicide	Broad-spectrum, systemic
Imazethapyr	Herbicide	Selective, pre-, post-emergent
Imazethapyr, ammonium salt	Herbicide	Selective, pre-, post-emergent
Imidacloprid	Insecticide	Systemic
Iprodione	Fungicide	Contact
Isoxaben	Herbicide	Soil, pre-emergent
Kresoxim-methyl	Fungicide	Non-systemic, preventive

A.I.	Use	Description
Linuron	Herbicide	Selective
Malathion	Insecticide	Nonsystemic foliar
Mandipropamid	Fungicide	Foliar
MCPA, dimethylamine salt	Herbicide	Hormone-type
MCPP acid (mecoprop, MCPPA)	Herbicide	Systemic
MCPP, dimethylamine salt	Herbicide	Systemic
MCPP, potassium salt	Herbicide	Systemic
Mecoprop-P	Herbicide	Systemic hormone-type
Mefenoxam	Fungicide	Seed treatment, soil, foliar
Mepiquat chloride	Bioregulator	Harvest aid
Mesosulfuron-methyl	Herbicide	Selective, post-emergent
Metalaxyl	Fungicide	Seed treatment, soil, foliar
Metaldehyde	Molluscicide	Contact
Methamidophos	Insecticide/ acaricide	Narrow spectrum
Methidathion	Insecticide/ acaricide	Nonsystemic
Methiocarb	Insecticide/ acaricide	Nonsystemic
Methomyl	Insecticide	Broad spectrum
Methoxyfenozide	Insecticide	Insect growth regulator
Methyl isothiocyanate	Fumigant	Soil, preplant
Methyl parathion	Insecticide	Broad spectrum
Metiram	Fungicide	EBDC type, broad spectrum
Metolachlor	Herbicide	Selective, pre-emergent
Metribuzin	Herbicide	Selective, systemic
Milbemectin	Insecticide/ miticide	Contact, stomach action
Molinate	Herbicide	Selective
MSMA	Herbicide	Post-emergent
Napropamide	Herbicide	Selective
Nicosulfuron	Herbicide	Selective, systemic
Nitrapyrin	Nitrification inhibitor	Selective
Norflurazon	Herbicide	Selective, preplant
Orthosulfamuron	Herbicide	Selective, post-emergent
Oryzalin	Herbicide	Selective, pre-emergent

A.I.	Use	Description
Oxydematon-methyl	Insecticide/ acaricide	Systemic, contact
Paraquat dichloride	Desiccant/ herbicide	Contact
Penoxsulam	Herbicide	Post-emergent
Phenmedipham	Herbicide	Post-emergent
Phorate	Insecticide	Systemic, soil
Phosmet	Insecticide	Broad spectrum
Piperalin	Fungicide	Ornamental
Piperonyl butoxide, technical	Synergist	Pyrethroids/Pyrethrins
Profenofos	Insecticide/ acaricide	Broad spectrum
Prohexadione calcium	Herbicide	Plant growth regulator
Prometon	Herbicide	Pre- and post-emergent
Prometryn	Herbicide	Selective, pre-, post-emergent
Propamocarb hydrochloride	Fungicide	Selective
Propanil	Herbicide	Contact, post-emergent
Propiconazole	Fungicide	Foliar
Propyzamide	Herbicide	Pre-, post-emergent
Pymetrozine	Insecticide	Systemic, soil or foliar
Pyraclostrobin	Fungicide	Foliar, respiration inhibitor
Pyrazon	Herbicide	Pre-, early post-emergent
Pyrithiobac sodium	Herbicide	Pre-, post-emergent
Quinclorac	Herbicide	Selective, pre-, post-emergent
Rimsulfuron	Herbicide	Selective, systemic
S-metolachlor	Herbicide	Selective, preplant
Sethoxydim	Herbicide	Systemic, post-emergent
Siduron	Herbicide	Selective, pre-emergent
Simazine	Herbicide	Selective
Spinetoram	Insecticide	Selective
Sulfentrazone	Herbicide	Selective, pre-, post-emergent
Sulfometuron-methyl	Herbicide	Contact, residual
Sulfosulfuron	Herbicide	Selective, pre-, post-emergent
Tebuconazole	Fungicide	Systemic
Tebufenozide	Insecticide	Systemic

A.I.	Use	Description
Tebuthiuron	Herbicide	Nonselective
Terrazole (Etridiazole)	Fungicide	Ornamental, turf
Thiamethoxam	Insecticide	Systemic
Thiazopyr	Herbicide	Selective, pre-emergent
Thiobencarb	Herbicide	Pre-, post-emergent
Thiophanate-methyl	Fungicide	Systemic, broad spectrum
Tralkoxydim	Herbicide	Selective, post-emergent
Triadimefon	Fungicide	Systemic
Triallate	Herbicide	Selective, pre-emergent
Triclopyr, butoxyethyl ester	Herbicide	Systemic, post-emergent
Triclopyr, triethylamine salts	Herbicide	Systemic, post-emergent
Trifloxysulfuron-sodium	Herbicide	Selective, post-emergent
Triflumizole	Fungicide	Systemic, broad spectrum
Triflurosulfuron-methyl	Herbicide	Growth regulator, soil
Trinexapac-ethyl	Herbicide	Growth regulator, soil
Uniconazole-p	Herbicide	Plant growth regulator
Vinclozolin	Fungicide	Contact, broad spectrum
