Report PCPA13

EXECUTIVE SUMMARY

SUMMARY

Food and Agricultural Code (FAC) section 13144(b) requires the Department of Pesticide Regulation (DPR) to annually post the following information to DPR's Web site:

- A list of pesticide active ingredients (A.I.s) registered for agricultural use with groundwater protection data gaps.
- A list of the pesticide A.I.s with data exceeding specific numerical values (SNVs).
- The sales and use information for the pesticides that exceed the SNVs.

As part of the registration process, DPR obtains environmental fate data for each A.I. which includes information on the mobility and persistence of that pesticide. Pesticides that exceed the SNVs established by DPR have a greater potential to contaminate groundwater because they are both mobile and persistent in the environment.

The 2013 Status Report lists 254 A.I.s that exceed the SNVs, of which 193 are currently registered for use in California. As compared to the previous list (2012), the current report includes three additional A.I.s that exceed the SNVs. This report includes the mean physical-chemical values (with respect to the SNVs), registration status, current California sales and use data, and mode of action for each listed A.I.

All pesticides for which there are data on file have been included in this report regardless of registration status. In many cases, an A.I. that is no longer registered for sale in California may still be used until the existing stock is depleted. Also, registrants may propose new uses for an A.I. that is no longer registered. Since the current or potential uses of previously registered A.I.s could threaten groundwater, DPR continues to include them in this report.

There are no data gaps for the listed pesticides; the data requirements for registration are satisfied.

BACKGROUND

The Pesticide Contamination Prevention Act (PCPA) of 1985 added sections 13141–13152 to the FAC and established a set of data requirements for identifying potential groundwater contaminants. As required by the PCPA, registrants of agricultural use pesticides must provide DPR with data on the environmental fate of the A.I.s in their products. DPR established threshold values, or SNVs, for water solubility, soil adsorption, hydrolysis half-life, aerobic soil metabolism half-life, and anaerobic soil metabolism half-life. SNVs provide a basis for estimating the relative risk of groundwater contamination posed by agricultural use pesticides.

As required by the PCPA (FAC section 13145[d]), DPR established the Groundwater Protection List (GWPL) (Title 3, California Code of Regulations [3 CCR] section 6800) to identify

pesticides that have been found in groundwater and those that pose a risk to groundwater. 3 CCR section 6800(a) includes pesticides that have been detected in groundwater in California and whose use is regulated to mitigate or prevent further pollution. 3 CCR section 6800(b) includes registered agricultural use pesticides that exceed the SNVs and are applied or injected into the soil or require flood or furrow irrigation within 72 hours after the application. DPR monitors pesticides included in 3 CCR section 6800(b) to determine whether they have migrated to groundwater. If any are found to have migrated to groundwater as a result of agricultural use, the PCPA establishes procedures for modifying or canceling the use of such pesticides to mitigate or prevent further pollution.

REPORT REQUIREMENTS PURSUANT TO THE PESTICIDE CONTAMINATION PREVENTION ACT

Food and Agricultural Code (FAC) section 13144(b) requires DPR to annually post the following information to the department's Web site for pesticides registered for agricultural use in California:

1. A list of each pesticide A.I., other specified ingredient, or degradation product of a pesticide A.I. for which there is a groundwater protection data gap.
2. A list of pesticides that contain an A.I., other specified ingredient, or degradation product of a pesticide A.I. that is greater than one or more of the numerical values established pursuant to PCPA, or is less than the numerical value in the case of the soil adsorption coefficient, in both of the following categories:
 - (a) Water solubility or soil adsorption coefficient (K_{oc}).
 - (b) Hydrolysis, aerobic soil metabolism, anaerobic soil metabolism, or field dissipation.
3. Provide for each pesticide A.I. listed pursuant to number 2, the amount sold in California for the most recent year of available data and where and for what purpose the pesticide was used.

The information is presented in two sections: (1) "Status of the Groundwater Protection Data Gaps" and (2) "Physical-Chemical Parameters, Sales, Use, and Mode of Action for Pesticide Active Ingredients Exceeding the Specific Numerical Values," which lists the properties of pesticides identified as potential leachers and the SNVs established by DPR.

SECTION 1: STATUS OF THE GROUNDWATER PROTECTION DATA GAPS

In 1985, the PCPA required registrants to submit mobility, persistence and environmental fate data, as stipulated in FAC section 13143(a), for then-registered agricultural pesticides or face penalties. The number of pesticides subject to the data call-in at that time was 147. As of 2002, all of those historical data gaps have been filled.

If a registrant of an agricultural use pesticide lacks the data required by the PCPA, they may apply for an interim registration, as stipulated in FAC sections 13161-13170. DPR can defer, for up to three years, the submission of no more than three of the following registration data requirements:

- Efficacy studies.
- Octanol-water partition coefficient (KOW).
- Soil photolysis.
- A field dissipation study.
- A study required by the PCPA that will be redone to correct errors or a study conducted under California conditions or guidelines, if the weight of evidence from all other submitted data support a scientific judgment in favor of interim registration.

Except for efficacy data, the deferral of any of the other data results in a “groundwater protection data gap” as defined in FAC section 13142(f). Currently, there are no interim registrations for agricultural use products and, therefore, no groundwater protection data gaps. Missing values in the database, indicated by a NA (not available) in Table 1, arise from deficiencies in the upkeep of the database itself, not data gaps, and are currently under investigation.

SECTION 2: PHYSICAL-CHEMICAL PARAMETERS, SALES, USE, AND MODE OF ACTION FOR ACTIVE INGREDIENTS EXCEEDING THE SPECIFIC NUMERICAL VALUES

FAC section 13144(a) requires DPR to establish thresholds known as SNVs for water solubility, K_{oc} , hydrolysis half-life, aerobic soil metabolism half-life, anaerobic soil metabolism half-life, and field dissipation half-life. These parameters are correlated with the potential of a pesticide to leach to groundwater; pesticides found in ground water tend to be more mobile and persistent than those not found in ground water. Water solubility and K_{oc} are considered indicators of the mobility of an A.I. within the soil, while the half-lives for hydrolysis, aerobic and anaerobic soil metabolism and field dissipation are considered indicators of the persistence of the A.I. in the soil.

Statistical comparison procedures were used to calculate the SNVs. Based on nationwide groundwater studies, a list of pesticide A.I.s was created and separated into two groups:

- (1) A.I.s that had been detected in groundwater as a result of legal agricultural use (leachers) and
- (2) A.I.s that had been sampled for and not found in groundwater as a result of legal agricultural use (nonleachers). Values for the physical-chemical parameters of A.I.s in each group were determined from the open literature and DPR-approved studies submitted by pesticide registrants

in fulfillment of the data call-in requirements in FAC section 13143. The data for each parameter was tested for their usefulness in discriminating between leachers and nonleachers by determining whether the means of the two groups were significantly different. The tests showed that the means of the data for water solubility, hydrolysis half-life, K_{oc} , and the anaerobic soil metabolism half-life for chemicals identified as leachers were significantly different from the means of chemicals identified as nonleachers. The SNVs for these properties were established as those values that would identify as leachers 90 percent of the chemicals found in groundwater due to agricultural use (Wilkerson and Kim, 1986). The means of the two groups for aerobic soil metabolism, however, were not significantly different. Because the PCPA requires DPR to establish an SNV for each physical-chemical parameter, the SNV for the aerobic soil metabolism half-life was set at a value that minimized its importance in the discrimination procedure. Details on the establishment and subsequent revisions to the SNVs can be found in prior reports (Johnson, 1991; Johnson, 1989; Johnson, 1988). The SNVs currently in regulation (3 CCR section 6804) are:

- | | |
|---|-----------------------------|
| (a) Water solubility | 3 ppm |
| (b) K_{oc} | 1900 cm^3/g |
| (c) Hydrolysis half-life | 14 days |
| (d) Aerobic soil metabolism half-life | 610 days |
| (e) Anaerobic soil metabolism half-life | 9 days |

No values have been established for field dissipation because of insufficient data. In 1989, the SNVs were established by regulation in 3 CCR section 6804 and were last updated in 1993.

DPR typically receives multiple studies for each physical-chemical parameter, which are then averaged together before being compared to their respective SNV. The data included in these studies are evaluated thoroughly and only those that meet certain conditions are included in the average. For solubility, only studies conducted at 20⁰ C are considered. Hydrolysis studies must be carried out between 19⁰ C and 31⁰ C and at a pH between 6.0 and 8.0. Soil adsorption, aerobic soil metabolism, and anaerobic soil metabolism do not have similar requirements. These criteria were chosen to reflect ambient, environmental conditions; experiments carried out under extreme temperatures or pH might not be an accurate reflection of a pesticide's fate in the field.

Pursuant to FAC sections 13144(b) and 13145(d), pesticide A.I.s are placed on a list of potential leachers if both their mobility and persistence parameter values exceed (or are less than in the case of the K_{oc}) the corresponding SNVs. Pesticides are then placed on the GWPL (3 CCR 6800[b]) if any of the following are true about their application method:

- applied to or injected into the soil by ground-based application equipment or by chemigation, or
- the application is followed, within 72 hours, by flood or furrow irrigation.

Table 1 is a list of A.I.s that exceed the SNVs and their respective mean physical-chemical values.

Three A.I.s are new¹ to the 2013 list of pesticides that exceed the SNVs:

- Aminocyclopyrachlor (herbicide)
- Fluxapyroxad (fungicide)
- Pyriproxyfen (insecticide)

PCPA section 13144(b) also requires DPR to provide, for each A.I. in Table 1, the amount sold in California, and where and for what purpose it was used. The 2012 pesticide sales² and use data³ are shown in Table 2. Information on the A.I.s and their modes of action can be found in Table 3.

1. For more information on the registration status of pesticide A.I.s and their respective products, please go to DPR's Registration Branch's website, available at <<http://www.cdpr.ca.gov/docs/registration/regmenu.htm>>.

2. For more information on the amount of pesticides sold, please go to DPR's "Reports of Pesticides Sold in California" website, available at <<http://www.cdpr.ca.gov/docs/mill/nopdsold.htm>>.

3. For more information on where pesticides are applied, and in what amounts, please go to DPR's "Pesticide Use Reporting" website, available at <<http://www.cdpr.ca.gov/docs/pur/purmain.htm>>.

^a No degradation occurred during the study. The half-life is greater than the value listed, which is the length of the study.

^b Not available; currently under investigation.

^c New A.I.; these A.I.s were not listed in the 2012 report.

^d Study has been waived.

Table 2. Pesticide sales and use reported during 2012 for A.I.s exceeding the SNVs (CDPR, 2014a; CDPR, 2014b).

2,4-D, 2-ethylhexyl ester	Herbicide	Selective, systemic
2,4-D, butoxyethanol and isooctyl esters	Herbicide	Selective, systemic
2,4-D, diethanolamine salt	Herbicide	Selective, systemic
2,4-D, dimethylamine salt	Herbicide	Selective, systemic
2,4-D, isooctyl ester	Herbicide	Selective, systemic
2,4-D, isopropyl ester	Herbicide	Selective, systemic
2,4-D, triisopropanolamine salt	Herbicide	Selective, systemic
2,4-D, triisopropylamine salt	Herbicide	Selective, systemic
4(2,4-DB), dimethylamine salts	Herbicide	Selective, post-emergent
Acephate	Insecticide	Contact, systemic
Acetamiprid	Insecticide	Systemic
Acibenzolar-s-methyl	Fungicide	Selective, systemic
Alachlor	Herbicide	Pre-emergent
Aminocyclopyrachlor	Herbicide	Selective, systemic
Aminopyralid, triisopropanolamine salt	Herbicide	Broadleaf control
Atrazine	Herbicide	Selective, residual
Azoxystrobin	Fungicide	Foliar
Bensulfuron methyl	Herbicide	Selective
Bensulide	Herbicide	Selective, pre-emergent
Bentazon, sodium salt	Herbicide	Selective, pre-emergent
Bifenazate	Insecticide/ acaricide, miticide	Contact
Bispyribac-sodium	Herbicide	Selective, post-emergent
Boscalid	Fungicide	Broad spectrum
Bromacil	Herbicide	Pre-emergent
Bromoxynil heptanoate	Herbicide	Selective, post-emergent
Bromoxynil octanoate	Herbicide	Selective, post-emergent
Carbaryl	Insecticide	Broad spectrum
Chlorantraniliprole	Insecticide	Soil, foliar
Chloropicrin	Warning agent/ fumigant	Space, commodity, soil
Chlorothalonil	Fungicide	Broad spectrum, protectant
Chlorsulfuron	Herbicide	Selective

A.I.	Use	Description
Clethodim	Herbicide	Systemic, post-emergent
Clomazone	Herbicide	Broad spectrum, pre-emergent
Clopyralid	Herbicide	Selective, post-emergent
Clopyralid, monoethanolamine salt	Herbicide	Selective, post-emergent
Clopyralid, triethylamine salt	Herbicide	Selective, post-emergent
Clothianidin	Insecticide	Systemic
Cycloate	Herbicide	Selective, preplant
Cyflufenamid	Fungicide	Selective, pre/post-emergent
Cyprodinil	Fungicide	Systemic
Cyromazine	Insecticide	Growth regulator
D-trans Allethrin	Insecticide	Broad Spectrum
Dazomet	Fungicide/ nematocide/ herbicide/ slimicide	Preplant
Diazinon	Insecticide/ nematocide	Soil/foliar/seed
Dicamba	Herbicide	Selective, systemic
Dicamba, diglycolamine salt	Herbicide	Selective, systemic
Dicamba, dimethylamine salt	Herbicide	Selective, systemic
Dicamba, potassium salt	Herbicide	Selective, systemic
Dicamba, sodium salt	Herbicide	Selective, systemic
Dichlobenil	Herbicide	Selective, cellulose
Dichlorprop-P, dimethylamine salt	Herbicide	Selective, post-emergent
Dichlorprop-P, isooctyl ester	Herbicide	Selective, post-emergent
Dicloran	Fungicide	Pre/post-harvest
Difenoconazole	Fungicide	Systemic, broad spectrum
Diflufenzopyr, sodium salt	Herbicide	Selective, post-emergent
Dimethenamid-P	Herbicide	Selective, pre-emergent
Dimethoate	Insecticide/ acaricide	Systemic
Dimethomorph	Fungicide	Selective, post-emergent
Dinotefuran	Insecticide	Selective, systemic
Diquat dibromide	Desiccant/ herbicide	Contact
Dithiopyr	Herbicide	Pre/post-emergent
Diuron	Herbicide	Selective, general
Dodine	Fungicide	Systemic, preventative, foliar
Emamectin benzoate	Insecticide	Systemic, contact
Endothall, dipotassium salt	Herbicide/ algicide/ growth regulator	Pre/post-emergent

A.I.	Use	Description
Endothall, mono (N,N-dimethyl alkylamine) salt	Desiccant/ algicide	Contact
EPTC	Herbicide	Selective
Ethofumesate	Herbicide	Selective
Ethoprop	Insecticide/ nematocide	Soil
Fenamidone	Fungicide	Broad spectrum, foliar, soil
Fenarimol	Fungicide	Systemic, foliar
Fenhexamid	Fungicide	Systemic, curative, foliar
Fipronil	Insecticide	Contact, stomach
Flazasulfuron	Herbicide	Systemic, pre/post-emergent
Flonicamid	Insecticide	Contact, stomach
Fluazifop-P-butyl	Herbicide	Selective, post-emergent
Fludioxonil	Fungicide	Contact
Fluopicolide	Fungicide	Foliar, soil
Flurprimidol	Herbicide	Selective, post-emergent
Flutolanil	Fungicide	Systemic
Fluxapyroxad	Fungicide	Broad spectrum
Foramsulfuron	Herbicide	Selective, post-emergent
Forchlorfenuron	Plant Growth Regulator	Increase cell growth
Formetanate hydrochloride	Acaricide/ insecticide	Foliar
Fosetyl-AL, technical	Fungicide	Systemic, preventative
Fosthiazate	Nematicide	Systemic
Glufosinate-ammonium	Herbicide	Selective
Glyphosate	Herbicide	Nonselective, post-emergent
Glyphosate, isopropylamine salt	Herbicide	Nonselective, post-emergent
Halosulfuron-methyl	Herbicide	Pre/post-emergent
Hexazinone	Herbicide	Contact, residual
Imazamox, ammonium salt	Herbicide	Selective, post-emergent
Imazapic, ammonium salt	Herbicide	Selective, pre/post-emergent
Imazapyr	Herbicide	Broad-spectrum, systemic
Imazapyr, isopropylamine salt	Herbicide	Broad-spectrum, systemic
Imazethapyr, ammonium salt	Herbicide	Selective, pre/post-emergent
Imazosulfuron	Herbicide	Broadleaf control
Imidacloprid	Insecticide	Systemic
Indaziflam	Herbicide	Soil, pre-emergent

A.I.	Use	Description
Iodosulfuron-methyl-sodium	Herbicide	Post-emergent
Ipconazole	Fungicide	Systemic, broad spectrum
Iprodione	Fungicide	Contact
Isoxaben	Herbicide	Soil, pre-emergent
Kresoxim-methyl	Fungicide	Non-systemic, preventive
Linuron	Herbicide	Selective
Malathion	Insecticide	Nonsystemic foliar
Mandipropamid	Fungicide	Foliar
MCPA, dimethylamine salt	Herbicide	Plant growth regulator
MCPP acid (mecoprop, MCPPA)	Herbicide	Systemic
MCPP, dimethylamine salt	Herbicide	Systemic
MCPP, potassium salt	Herbicide	Systemic
Mecoprop-P	Herbicide	Systemic hormone-type
Mefenoxam	Fungicide	Seed treatment, soil, foliar
Mepiquat chloride	Bioregulator	Harvest aid
Mesosulfuron-methyl	Herbicide	Selective, post-emergent
Mesotrione	Herbicide	Foliar, pre/post-emergent
Metalaxyl	Fungicide	Seed treatment, soil, foliar
Metaldehyde	Molluscicide	Contact
Metconazole	Fungicide	Systemic
Methidathion	Insecticide/ acaricide	Nonsystemic
Methiocarb	Insecticide/ acaricide	Nonsystemic
Methomyl	Insecticide	Broad spectrum
Methoxyfenozide	Insecticide	Insect growth regulator
Methyl isothiocyanate	Fumigant	Soil, preplant
Metiram	Fungicide	EBDC type, broad spectrum
Metolachlor	Herbicide	Selective, pre-emergent
Metribuzin	Herbicide	Selective, systemic
Milbemectin	Insecticide/ miticide	Contact, stomach action
MSMA	Herbicide	Post-emergent
Myclobutanil	Fungicide	Systemic, broad spectrum
Napropamide	Herbicide	Selective
Nicosulfuron	Herbicide	Selective, systemic
Nitrapyrin	Nitrification inhibitor	Selective

A.I.	Use	Description
Norflurazon	Herbicide	Selective, preplant
Orthosulfamuron	Herbicide	Selective, post-emergent
Oryzalin	Herbicide	Selective, pre-emergent
Oxydematon-methyl	Insecticide/ acaricide	Systemic, contact
Paraquat dichloride	Desiccant/ herbicide	Contact
Penoxsulam	Herbicide	Post-emergent
Penthiopyrad	Fungicide	Broad spectrum, soil, foliar
Phenmedipham	Herbicide	Post-emergent
Phorate	Insecticide	Systemic, soil
Phosmet	Insecticide	Broad spectrum
Piperalin	Fungicide	Ornamental
Piperonyl butoxide, technical	Synergist	Pyrethroids/Pyrethrins
Prohexadione calcium	Herbicide	Plant growth regulator
Prometon	Herbicide	Pre/post-emergent
Prometryn	Herbicide	Selective, pre/post-emergent
Propamocarb hydrochloride	Fungicide	Selective
Propanil	Herbicide	Contact, post-emergent
Propiconazole	Fungicide	Foliar
Propyzamide	Herbicide	Pre-, post-emergent
Prothioconazole	Fungicide	Foliar, soil, seed treatment
Pymetrozine	Insecticide	Systemic, soil or foliar
Pyraclostrobin	Fungicide	Foliar, respiration inhibitor
Pyrazon	Herbicide	Pre/early post-emergent
Pyrifluquinazon	Insecticide	Contact
Pyriothiobac sodium	Herbicide	Pre/post-emergent
Pyroxsulam	Herbicide	Post-emergent
Quinclorac	Herbicide	Selective, pre/post-emergent
Rimsulfuron	Herbicide	Selective, systemic
S-metolachlor	Herbicide	Selective, preplant
Saflufenacil	Herbicide	Selective, pre-emergent
Sethoxydim	Herbicide	Systemic, post-emergent
Siduron	Herbicide	Selective, pre-emergent
Simazine	Herbicide	Selective
Spinetoram	Insecticide	Selective

A.I.	Use	Description
Sulfentrazone	Herbicide	Selective, pre/post-emergent
Sulfometuron-methyl	Herbicide	Contact, residual
Sulfosulfuron	Herbicide	Selective, pre/post-emergent
Tebuconazole	Fungicide	Systemic
Tebufenozide	Insecticide	Systemic
Tebuthiuron	Herbicide	Nonselective
Tembotrione	Herbicide	Selective, post-emergent
Terrazole (Etridiazole)	Fungicide	Ornamental, turf
Tetraconazole	Fungicide	Foliar
Thiamethoxam	Insecticide	Systemic
Thiencarbazone-methyl	Herbicide	Selective, pre/post-emergent
Thiobencarb	Herbicide	Pre/post-emergent
Thiophanate-methyl	Fungicide	Systemic, broad spectrum
Triadimefon	Fungicide	Systemic
Triallate	Herbicide	Selective, pre-emergent
Triclopyr, butoxyethyl ester	Herbicide	Systemic, post-emergent
Triclopyr, triethylamine salts	Herbicide	Systemic, post-emergent
Trifloxysulfuron-sodium	Herbicide	Selective, post-emergent
Triflumizole	Fungicide	Systemic, broad spectrum
Triflusaluron-methyl	Herbicide	Plant growth regulator
Trinexapac-ethyl	Herbicide	Plant growth regulator
Triticonazole	Fungicide	Systemic, broad spectrum
Uniconazole-p	Herbicide	Plant growth regulator
Vinclozolin	Fungicide	Contact, broad spectrum
Zoxamide	Fungicide	Foliar
