1. This Agreement is entered into between the State Agency and the Contractor named below:

STATE AGENCY'S NAME
Department of Pesticide Regulation, hereinafter referred to as “State”

CONTRACTOR'S NAME
The Regents of the University of California, Riverside, hereinafter referred to as “University”

2. The term of this Agreement is:

July 1, 2018 through June 30, 2020

3. The maximum amount of this Agreement is:

$149,991.00

4. The Parties agree to comply with the terms and conditions of the following Exhibits, which by this reference are made a part of the Agreement.

- Exhibit A – A7: A – Scope of Work; A1 – Deliverables; A2 – Key Personnel; A3 – Authorized Representatives; A4 – Use of Intellectual Property; A5 – Resumes/Biosketch; A6 – Current & Pending Support; A7 – Third Party Confidential Information (if applicable)
- Exhibit B – B – Budget; B1 – Budget Justification; B2 – Subawardee Budgets (if applicable); B3 – Invoice Elements
- Exhibit C* – University Terms and Conditions

Check mark additional Exhibits below, and attach applicable Exhibits or provide internet link:

- Exhibit D – Additional Requirements Associated with Funding Sources
- Exhibit E – Special Conditions for Security of Confidential Information
- Exhibit F – Access to State Facilities or Computing Resources
- Exhibit G – Negotiated Alternate UTC Terms

Items shown with an Asterisk (*) are hereby incorporated by reference and made part of this agreement as if attached hereto.

These documents can be viewed at [http://www.dgs.ca.gov/ols/Resources/ModelContractLanguageUniversities.aspx](http://www.dgs.ca.gov/ols/Resources/ModelContractLanguageUniversities.aspx).

IN WITNESS WHEREOF, this Agreement has been executed by the Parties hereto.

Project Summary & Scope of Work

☐ Contract  ☐ Grant

Pl Name:  Choe, Dong-Hwan

Project Title:  Research the depositional patterns of pesticides throughout a structure after a fogger product is activated

Project Summary/Abstract
Briefly describe the long-term objectives for achieving the stated goals of the project.

1. Project Objectives

Using several different total release pyrethroid containing fogger products that are currently available in California, we propose to conduct the research in experimental house structures with realistic household materials and settings.

The specific aims of this study are to:

1) Identify the best sample collection / analysis method that may be used in characterizing the depositional patterns (e.g., surfaces exposed and extracted / analyzed in the laboratory) for pyrethroids after the fogger application (passive collection method, GC-MS or GC-FID or SPME);

2) Obtain quantitative distribution of pyrethroids on various surfaces after the fogger application (several variables, such as height, distance from the fogger, vertical vs. horizontal surface, presence of wall or door, etc.);

3) Determine the pest control efficacy with laboratory colonies of German cockroach and bed bug (pyrethroid susceptible and resistance strains); and

4) Develop a standard method for estimating the potential of off-site movement of pyrethroids from the surfaces (various substrate types such as bath tub, tile, carpet, and flooring).

If Third-Party Confidential Information is to be provided by the State:

☐ Performance of the Scope of Work is anticipated to involve use of third-party Confidential Information and is subject to the terms of this Agreement; OR

☐ A separate CNDA between the University and third-party is required by the third-party and is incorporated in this Agreement as Exhibit A7, Third Party Confidential Information.
Scope of Work

Describe the goals and specific objectives of the proposed project and summarize the expected outcomes. If applicable, describe the overall strategy, methodology, and analyses to be used. Include how the data will be collected, analyzed, and interpreted as well as any resource sharing plans as appropriate. Discuss potential problems, alternative strategies, and benchmarks for success anticipated to achieve the goals and objectives.

2. Problem Statement

Pyrethroids are frequently detected in wastewater effluent representing a source of potential toxicity to surface waters to which they discharge (Teerlink 2014). One recent study (Weston et al. 2013) suggested that pyrethroid inputs from indoor cleaning activities within residential areas is significant to total mass loading of pyrethroids in wastewater. Registered uses for pyrethroids include a variety of indoor uses including pet treatments, indoor pest control, and clothing treatment. The presence of pyrethroids on indoor dust has been reported (Julien 2008). Cleaning activities, such as mopping and surface washing, could represent a pathway for pyrethroids to enter the wastewater collection system. Washing pets treated with pyrethroids could also represent a pathway to the wastewater collection system. Total release fogger products (also known as “bug bombs”) are available for general public’s use. In California, more than 60 product names are registered for this particular type of formulation. Many of them contain pyrethroids and other compounds such as synergists (e.g., piperonyl butoxide) and petroleum propellant blend. These products often list bed bug, flea, or cockroach on their labels as target pests. However, based on a recent study, the efficacy of these fogger products to control insects hidden in harborage sites was brought into question. There is very little understanding of the depositional patterns of pesticides throughout a structure after a fogger product is activated. This information is critical in estimating potential wash-off fractions of active ingredients found within this product type. Wash-off fractions are essential parameters in developing down-the-drain source identification models capable of predicting pesticide loading to the waste stream. In conjunction with their efficacy test using live pest insects, the information will provide an important insight to understand the limitations of these fogger formulations, and to estimate the potential of off-site movement of pyrethroids used in indoor settings.

3. Work to be Performed

A. University will obtain a suitable research location to answer study objectives. The research station will allow for configuring the internal compartments to test various application scenarios. A digital schematic will be created for each application trial, consisting of detailed room measurements and placement of the fogger during the trial.

B. At least three current use fogger products will be chosen for the study, each product containing a different active ingredient. Product label information will be recorded for each test, including product name, EPA registration number, active ingredient, percent active ingredient, volume, pests controlled, and effective room size.

C. At least two configurations will be tested during the application trials. These will include a single room and double room scenarios. The rooms will be designed to simulate a real living area, with raised level countertops and a designated sink. Product label directions will be followed for the duration of the trials.

D. Pesticide mass will be calculated as concentration and percent recovery of total product mass. Residual concentrations will be evaluated on several structural surfaces, including floors, walls, ceiling, and countertops. Residual concentrations from each of the surfaces will
be tested at several time points after the initiation of the test to evaluate pesticide persistence on various structure surfaces.

E. Several representative indoor pests (e.g., cat flea, bed bug, German cockroach, brown-banded cockroach) will be set up inside of the experimental structure during the fogger application to determine the pest control efficacy of the treatment. Based on the pest biology, different settings and scenarios will be included (e.g., distance from the fogger, height of the pest location, presence or absence of the harborage or cover) to reflect realistic indoor pest infestation condition.

4. State Responsibilities

A. State will work with the University to ensure the parameters of the experimental design are adequate to answer all the study questions. Trials will not commence until both parties are satisfied with experimental setup.

B. State will review draft report and provide feedback to author prior to submission of final report.
Exhibit A1 - Deliverables

**SCHEDULE OF DELIVERABLES**

List all items that will be delivered to the State under the proposed Scope of Work. Include all reports, including draft reports for State review, and any other Deliverables, if requested by the State and agreed to by the Parties.

If use of any Deliverable is restricted or is anticipated to contain preexisting Intellectual Property with any restricted use, it will be clearly identified in Exhibit A4, Use of Preexisting Intellectual Property.

Unless otherwise directed by the State, the University Principal Investigator shall submit all Deliverables to the State Contract Project Manager, identified in Exhibit A3, Authorized Representatives.

Experience and Research Focus
My research focuses on three major areas: urban entomology, insect behavior, and chemical ecology. In particular, my research has focused on exploring innate and learned behaviors of economically or environmentally important insect species to develop more effective integrated pest management (IPM) programs. I use manipulative laboratory studies to investigate how the behaviors of pest insects can be exploited to improve management and to develop novel management techniques. I also test the feasibility of these new techniques in real-world conditions. I draw upon my expertise in behavioral ecology, experimental design, chemical ecology and analytical chemistry to illuminate the biology of target insects, and to inform the design of new approaches for control. In addition to the bioassays involving chemistry, physiology, behavior, and toxicology, the effort to incorporate the behavioral information of target species into the working IPM program often requires extensive design, manufacturing, and testing of devices in the field.

Positions and Employment
11/2011 - Present
Assistant CE Specialist and Assistant Professor
Entomology / UC Riverside.

11/2009 - 10/2011 Postdoctoral Researcher
Environmental Science, Policy, and Management / UC Berkeley.

Memberships, Honors and Awards
01/2005 - current Member. Entomological Society of America.
2013 Early Career Chair in Urban Entomology.
2013 UC ANR Professional Society Travel Award.
2013 Academic Senate Regents Fellowship.
2008 Bayer Young Scientist of the Year Competition (2nd place)
2008 Selected as one of the "40 Under 40" future leaders of the pest management industry by Pest Management Professional Magazine

Principal Investigator (Last, First): Choe, Dong-Hwan
Exhibit B1

Budget Justification

The Budget Justification will include the following items in this format.

Personnel

Name. Starting with the Principal Investigator list the names of all known personnel who will be involved on the project for each year of the proposed project period. Include all collaborating investigators, individuals in training, technical and support staff or include as “to be determined” (TBD).

Role on Project. For all personnel by name, position, function, and a percentage level of effort (as appropriate), including “to-be-determined” positions.

Dong-Hwan Choe (PI) – Choe will be leading the project as a PI for the entire project period. Choe will oversee the entire project progression by advising the postdoctoral scholar and research staff associate in the project. Salary coverage is not requested in the project budget.

Jia-Wei Tay (Postdoctoral Scholar, $100,320) – Tay will work 70% of time during the entire period of the project. Under Choe’s supervision and guidance, Tay will design the study, conduct the experiment, collect the data, analyze the data, and write up the reports. The budget assumes a starting salary of $42,581 @ 100% time. Postdoc’s salary is increased 2% annually. The person will provide day-to-day continuity of the research effort.

Kathleen Campbell (Staff Research Associate, $14,412) – Campbell will work 10% of time during the entire period of the project. Campbell will assist Choe and Tay for the current project in setting up the experiment, collecting data, and arranging other logistics for the research in the experimental house structures at South Coast Research Extension Center. Starting monthly salary is $3,459 @ 100% time and Kathleen will be hired at 10% time to help with this project for the entire duration of the project. Salaries are based upon current University of California policies and escalated at 2% annually.

Fringe Benefits.

In accordance with University policy, explain the costs included in the budgeted fringe benefit percentages used, which could include tuition/fee remission for qualifying personnel to the extent that such costs are provided for by University policy, to estimate the fringe benefit expenses on Exhibit B.

Fringe benefits rates are calculated as a percentage of the gross salary and are in accordance with the rates reported to our audit agency, DHHS. Benefit for Kathleen Campbell starts at 58.8%. The composite postdoctoral researcher benefit rate for Jia-Wei Tay is 25.7% of salaries.

Travel

Itemize all travel requests separately by trip and justify in Exhibit B1, in accordance with University travel guidelines. Provide the purpose, destination, travelers (name or position/role), and duration of each trip. Include detail on airfare, lodging and mileage expenses, if applicable. Should the application include a request for travel outside of the state of California, justify the need for those out-of-state trips separately and completely.

The budget ($600) enables the investigators to travel for the experimental structures at South Coast Research Experiment Station at Irvine, CA, to conduct the proposed research activity and collect samples. Even though the dates, destinations, and durations of these trips are not known at this time, it is expected that at least 6 different trips will be needed for PI (Choe) and one additional person (e.g. postdoctoral scholar or SRA) per year to carry out the proposed research.

Materials and Supplies

Itemize materials supplies in separate categories. Include a complete justification of the project’s need for these items. Theft sensitive equipment (under $5,000) must be justified and tracked separately in accordance with State Contracting Manual Section 7.29.

The budget includes $2,660 for entire project duration ($1,700 for the year 1 and $960 for the year 2) for materials, supplies, and consumables. These are items that will be used to purchase items to set up the compartments in the experimental house structures, different surface materials (e.g., tiles, painted surface, bath tub, etc.) for the research. The fund will be also used to purchase at least two different kinds of total release fogger products to be tested, technical pyrethroids for quantitative analyses, thin layer chromatography plates, SPME (solid phase microextraction) devices, etc. Items may include, but are not necessarily limited to, chemicals, reagents, glassware, pesticides, and software as needed to carry out the purposes of the project.

Equipment

List each item of equipment (greater than or equal to $5,000 with a useful life of more than one year) with amount requested separately and justify each.

N/A

Consultant Costs

Consultants are individuals/organizations who provide expert advisory or other services for brief or limited periods and do not provide a percentage of effort to the project or program. Consultants are not involved in the scientific or technical direction of the project as a whole.
Provide the names and organizational affiliations of all consultants. Describe the services to be performed, and include the number of days of anticipated consultation, the expected rate of compensation, travel, per diem, and other related costs.

N/A

Subawardee (Consortium/Subrecipient) Costs
Each participating consortium organization must submit a separate detailed budget for every year in the project period in Exhibit B2 Subcontracts. Include a complete justification for the need for any subawardee listed in the application.

N/A

Other Direct Costs
Itemize any other expenses by category and cost. Specifically justify costs that may typically be treated as indirect costs. For example, if insurance, telecommunication, or IT costs are charged as a direct expense, explain reason and methodology.

N/A

Rent
If the Scope of Work will be performed in an off-campus facility rented from a third party for a specific project or projects, then rent may be charged as a direct expense to the award.

The budget includes $2,000 ($1,000 per year) for renting the experimental house structure (3 units) at South Coast Research Experiment Center (Irvine, CA) to carry out pyrethroid residue collection and analyses.

Indirect (F&A) Costs
Indirect costs are calculated in accordance with the budgeted indirect cost rate in Exhibit B.

Indirect (F&A) cost (total $30,008) is calculated based on 25% rate.
Exhibit B3 – Invoice Elements
Invoice and Detailed Transaction Ledger Elements

In accordance with Section 14 of Exhibit C – Payment and Invoicing, the invoice, summary report and/or transaction/payroll ledger shall be certified by the University's Financial Contact and the PI (or their respective designees).

Summary Invoice – includes either on the invoice or in a separate summary document – by approved budget category (Exhibit B) – expenditures for the invoice period, approved budget, cumulative expenditures and budget balance available¹

- Personnel
- Equipment
- Travel
- Subawardee – Consultants
- Subawardee – Subcontract/Subrecipients
- Materials & Supplies
- Other Direct Costs
  - TOTAL DIRECT COSTS (if available from system)
- Indirect Costs
  - TOTAL

Detailed transaction ledger and/or payroll ledger for the invoice period ²

- Univ Fund OR Agency Award # (to connect to invoice summary)
- Invoice/Report Period (matching invoice summary)
- GL Account/Object Code
- Doc Type (or subledger reference)
- Transaction Reference#
- Transaction Description, Vendor and/or Employee Name
- Transaction Posting Date
- Time Worked
- Transaction Amount

¹ If this information is not on the invoice or summary attachment, it may be included in a detailed transaction ledger.
² For salaries and wages, these elements are anticipated to be included in the detailed transaction ledger. If all elements are not contained in the transaction ledger, then a separate payroll ledger may be provided with the required elements.
Exhibit G – Negotiated Alternate UTC Terms (if applicable)

An alternate provision in Exhibit G must clearly identify whether it is replacing, deleting or modifying a provision of Exhibit C. The Order of Precedence incorporated in Exhibit C clearly identifies that the provisions on Exhibit G take precedence over those in Exhibit C.

While every effort has been made to keep the UTC as universal in its application as possible, there may be unique projects where a given term in the UTC may be inappropriate or inadequate. California Education Code §67327(b) allows for those terms to be changed, but only through the mutual agreement and negotiation of the State agency and the University campus. If a given term in the UTC is to be changed, the change should not be noted in Exhibit C, but rather noted separately in Exhibit G.

1. Harassment Free Workplace

The Department of Pesticide Regulation (DPR) is committed to providing a safe, secure environment, free from sexual misconduct. It is the policy of the Department that employees have the right to work in an environment that is free from all forms of discrimination, including sexual harassment. This policy specifically speaks to freedom from a sexually harassing act that results in the creation of an intimidating, hostile or offensive work environment or that otherwise interferes with an individual’s employment or work performance. As a Contractor with DPR, you and your staff are expected to comply with a standard of conduct that is respectful and courteous to DPR employees and all other persons contacted during the performance of this Agreement. Sexual harassment is unacceptable, will not be tolerated; and may be cause for prohibiting some or all of the Contractor’s staff from performing work under this Agreement.
