~~EH-03-05~~ Ground Water Protection Areas 2017

August ~~2003~~ 2017

Update

This publication is an update of the report ~~EH00-0803-05~~, “Ground Water Protection Areas,” which lists sections or portions of sections of land that are vulnerable to movement of pesticides to ground water via either leaching or runoff processes. These areas are based on soil properties and estimates of the depth-to-ground water, which has been denoted as the California Vulnerability Modeling (CALVUL) approach. ~~The classification of these sections is described in DPR publications EH00-05, “Update of the California Vulnerability Soil Analysis for Movement of Pesticide to Ground Water,” and EH00-07, “Sections of Land Requiring Special Assignment as Runoff or Leaching Ground Water Protection Areas.”~~

~~This update was triggered by the identification of additional GWPAs based on pesticide detections in ground water, by a request from a County Agricultural Commissioner to verify two sections identified in EH00-08 as ground water protection areas (GWPAs). This request resulted in a memorandum dated August 18, 2003, “Recommendation For Exclusion of Counties With Sparse and Non-Contiguous Ground Water Protection Areas From The Proposed Ground Water Regulations” (See Appendix). In the memorandum, DPR concluded that the CALVUL approach needed refinement for areas where GWPAs were not contiguous and were few in number.~~

~~Consequently, the memorandum contained a recommendation that counties that were sparsely populated with GWPAs and where the GWPAs were not contiguous should not be included in the proposed ground water regulations. This was a unique situation that applied to only 9 sections out of 3727 sections proposed as GWPAs. These nine sections were the only proposed GWPAs in Lake, San Benito, Santa Barbara, and Santa Clara Counties so these counties were not included in this revised document.~~

~~Recommendation For Exclusion of Counties With Sparse and
Non-Contiguous Ground Water Protection Areas From The Proposed Ground
Water Regulations Memo dated August 18, 2003~~

Paul Holliker
Director

MEMORANDUM

TO: ~~John S. Sanders, Ph.D., Chief
Environmental Monitoring Branch~~

FROM: ~~John Troiano, Senior Environmental Research Scientist
Environmental Monitoring Branch
(916) 324-4115~~

~~Joe Marade, Associate Environmental Research Scientist
Environmental Monitoring Branch
(916) 324-4119~~

DATE: ~~August 18, 2003~~

SUBJECT: ~~RECOMMENDATION FOR EXCLUSION OF COUNTIES WITH SPARSE AND
NON-CONTIGUOUS GROUND WATER PROTECTION AREAS FROM THE
PROPOSED GROUND WATER REGULATIONS~~

BACKGROUND

~~The California Department of Pesticide Regulation (DPR) is proposing regulations to expand the definition of vulnerable areas of land and to regulate pesticide use within those areas for ground water protection. The Santa Clara County Agricultural Commissioner (CAC) has requested DPR to review the basis for determination of two small sections of land that have been classified as ground water protection areas (GWPA's). The CAC requested a determination as to whether or not this review provides a basis for exclusion from listing these sections formally as GWPA's and, thus, potential exclusion from the proposed ground water regulations.~~

~~DPR has proposed ground water regulations to manage pesticide use in areas that are vulnerable to ground water contamination. These areas are defined with respect to soil properties and estimates of the depth to ground water, which has been denoted as the California Vulnerability Modeling Approach (CALVUL) (Troiano et al, 2000). The current method to delineate a vulnerable area is based on detections of pesticides in wells and these areas are called Pesticide Management Zones (PMZs). The GWPA's, as identified by CALVUL, expand upon these detections because it includes land masses that have not yet been sampled for pesticides but that are similar to vulnerable areas based on their geographic conditions.~~

~~Throughout the development of the CALVUL approach, we have advocated an open exchange of information between state and local levels. Through this relationship, the estimates produced by the CALVUL approach can be updated with information supplied locally, thereby refining local estimates of vulnerability.~~

John S. Sanders, Ph.D.

DISCUSSION

An important aspect of DPR's approach is that pesticide management practices are based on the local pathway of pesticide movement to ground water. The local pathways are subsequently affected by the local soil properties. To date, two pathways to ground water have been identified. One is leaching on coarse soils where over watering moves pesticide residues straight down from application sites. The other is runoff where residues are moved offsite in runoff water to areas that facilitate rapid movement to ground water. Currently, runoff areas are characterized by soils that have a shallow hardpan layer.

The effectiveness of the proposed program is based on applying the appropriate management practices to the vulnerable soil condition. With respect to the CALVUL modeling results, there is a high probability for this to occur when a local GWPA is formed as a large contiguous area with similar soils and with PMZs located within the contiguous area of similar soil. The map for the Fresno and Tulare counties (Figure 1, attached) illustrates the overlap between the GWPAs and sections of land with detections of pre-emergence herbicide residues. The brown areas in Figure 1 are coarse soil GWPAs where average depth to ground water is 70 feet or less and the blue areas are runoff GWPAs with hardpan soils where average depth to ground water is 70 feet or less. The black, outlined squares are sections of land where residues had been detected in previous samplings of domestic wells. Based on the overlap and relationship to contaminated areas, there is a high degree of confidence that the management practices recommended for each soil condition apply over the broad contiguous areas.

Some counties have a small number of GWPAs and they are generally not contiguous. One reason for this pattern is that the CALVUL approach applies to terrain that is relatively level where soils are located on slopes that are less than 15%. This restriction was included so that the model would apply to areas that are predominantly agricultural. For mountainous areas, the soils used for CALVUL would have been limited primarily to those that are located in valleys or in streams. One of the two leaching GWPAs in Santa Clara County reflect this condition where soil near the Pajaro River was weighted heavily and provided a coarse soil/leaching determination. Upon further examination of this area, it was determined that the soil near the river was clayey. Thus, although the section was classified as a coarse soil condition, because of the extreme permeability of the riverwash soil, the primary pathway for movement of agricultural residues to ground water, or in this case to the river, would be by runoff and not by leaching. The second section was similar in that riverwash soil was surrounded by clayey soils with agriculture. This analysis provides an example where the designation of a leaching GWPA would not correctly match the agricultural management practice to the agricultural soil condition. Further refinement of the geographical information systems approach is needed for areas where GWPAs are not contiguous and they are sparse.

John S. Sanders, Ph.D.

Page 3

RECOMMENDATION

~~Counties that are sparsely populated with GWPA's and where the GWPA's are not contiguous should not be included in the proposed ground water regulations. This determination applies to Lake, San Benito, Santa Barbara, and Santa Clara counties. The CACs of these counties should be aware that upon further investigation and with greater geographic information, larger contiguous GWPA's could be determined and upon this determination, these areas will be recommended for addition to the regulations. The sparse GWPA exclusion does not apply to counties with PMZs because they are known contaminated areas and require regulatory action. For example, Butte County has one GWPA but it is a current PMZ and so it will be listed as a GWPA.~~
