

The top five sites in total pesticide use in each county in 2015 and the top five pesticides used on each of these sites. The ranking of sites and pesticides is determined by total cumulative acres treated by active ingredient used. The acres treated are mostly agricultural. Cumulative acres treated is calculated by summing the acres treated in each application even when the same field is treated more than once in a year. (For example, if one acre is treated three times in a year with an individual active ingredient, it is counted as three acres treated.) Chemical names that end with an “\*” are adjuvants. Data are from the Department of Pesticide Regulation’s Pesticide Use Report, April 2017.
